Table of Contents:

Thesis Committee	I
Thesis Examining Committee	II
Dedication	III
Acknowledgment	IV
Abstract.....	V
الملخص.....	VII
Table of Contents:.....	IX
List of Tables	XI
List of Figures.....	XII
Abbreviation and Symbols	XIV
1. Introduction	1
2. Review of Literature	5
2.1 Fungi	5
2.2 Role of fungi in soil	6
2.3 Type of fungi	7
2.3.1 Beneficial fungi.....	7
2.3.2 Plant Pathogenic Fungi.....	9
2.4 Impact of plants and microbial communities on each other	11
2.5 Cultivation systems in Oman.....	12
2.6 Cucumbers and Tomatoes.....	13
2.7 Damping-off disease	17
2.8 Cultivation systems versus fungal diversity	19
2.9 Biological control	21
2.9.1 Definition of biological control	21
2.9.2 History of biological control	21
2.9.3 Types of biocontrol agents.....	22
2.9.4 Mechanisms of interactions with pathogens.....	24
2.9.5 Factors affecting biological control.....	27
2.9.5.1 Abiotic factors.....	27
2.9.5.2 Biotic factors affecting biological control	28
2.9.6 Commercial biocontrol products	29
2.9.7 Evaluations of biological and chemical controls	29
3. Materials and Methods	32
3.1 Evaluation of culture-based methods and pyrosequencing in estimating fungal diversity in soil	32
3.1.1 Collection of samples	32
3.1.2 Direct plating.....	32

3.1.3 Identification of fungi.....	32
3.1.4 DNA extraction for Pyrosequencing.....	36
3.1.5 Pyrosequencing Analyses.....	36
3.1.6 Direct plating vs pyrosequencing	36
3.2 Effect of farming systems (organic vs conventional) on fungal diversity....	37
3.2.1 Collection of Samples.....	37
3.2.2 Soil physicochemical properties.....	38
3.2.3 Pyrosequencing analyses	38
3.2.4 Statistical analysis	39
3.3 Isolation of antagonistic fungal isolates for the management of <i>Pythium</i> and <i>Rhizoctonia</i> -induced damping-off of cucumber	41
3.3.1 Collection of soil samples.....	41
3.3.2 Isolation of potential antagonistic fungi	41
3.3.3 <i>In vitro</i> screening of fungal biocontrol agents by dual culture method.....	41
3.3.4 Effect of antagonistic fungal isolates (TO144 and TT266) on cucumber growth	42
3.3.5 Effect of antagonistic fungal isolates (TO144 and TT266) on damping-off of cucumber.....	42
3.3.6 Molecular characterization of antagonistic fungi	43
3.3.7 Statistical analysis	44
4. Results	45
4.1 Evaluation of direct plating and pyrosequencing in estimating fungal diversity in soil	45
4.1.1 Isolation of fungal species using direct plating.....	45
4.1.2 Phylogenetic analysis	45
4.1.3 Estimation of fungal diversity using pyrosequencing and direct plating	45
4.1.4 Dominant fungal phyla and classes.....	48
4.2 Effect of farming systems (conventional vs organic farming) on fungal diversity	49
4.2.1 Soil analysis	49
4.2.2 Fungal diversity in organic versus conventional farming system (Cucumber).....	50
4.2.3 Fungal diversity in organic versus conventional farming system (Tomato).....	54
4.2.4 Relationship between fungal diversity and farming systems	58
4.3 Selection of antagonistic fungal isolates for the management of <i>Pythium</i> and <i>Rhizoctonia</i> -induced damping-off of cucumber	59
4.3.1 Isolation and antagonism of fungal isolates	59
4.3.2 Effect of TO144 and TT266 on growth of cucumber	60
4.3.3 Effect of TO144 and TT266 on <i>Pythium</i> damping-off	62
4.3.4 Effect of TO144 and TT266 on <i>Rhizoctonia</i> damping-off	63
4.3.5 Identification of TO144 and TT266 isolates	65
5. Discussion.....	68
6. Conclusion and Recommendations.....	75
7. References	76
